 **DREAM HEAT™**

*Dream Heat floor heating -
the heating technology
of the 21st century*

- The Dream Heat is a heating mat created by combining carbon fibre and carbon paste.

Additionally, the mate is coated with two laminate layers so there are 11 layers in total.

The product is very thin (only 0.7 mm) in comparison to classical floor heating.

The principle of Dream Heat sheet operation is INFRA RED heating.

- The Dream Heat sheet can be used to heat walls, floors and ceilings which then heat the air in the room keeping the air temperature constant.
- Reliable, efficient heating for years. The use of laminates resistant to thermo shrink ability in the product allows 30 years' warranty period.

HEATFORCE IR

Heatforce IR is a series of inexpensive infrared heaters, intended for small and medium-sized rooms (4-32 m²).

Optionally, the heaters can be equipped with accessories: a thermostat, a timer switch and a switch as well as feet that allow the heater to be placed on the floor.

They are available in various power configurations, which also determines the total size of the radiator.

Heatforce IR can be hung on the wall or placed on the floor.
